Here is a proven process for designing a supply chain network that best meets your business objectives.

1. Identify your primary objectives.
2. Consider the complexity of your operations and the technology available.
3. Design the logistics and distribution networks.
4. Implement policies and procedures.
5. Monitor and adapt as necessary.

Distribution Strategy Guide | Matrix Marketing Group

Designing a network topology is the first step in the logical design phase of the top-down network design methodology. To ensure the network can support the required performance and adaptability, it is important to architect a distribution layer of routers and switches that implement policies.
